Principles of Conservation Biology, Third Edition By Martha J. Groom, Gary K. Meffe, C. Ronald Carroll

Principles of Conservation Biology, Third Edition features a wholly revised organization, emphasizing analyses of different categories of threat and approaches to conservation. Coverage has been expanded to incorporate both terrestrial and marine conservation issues, and efforts in the U.S. and across the globe.

Principles' eighteen chapters introduce the major themes and concepts of this diverse and dynamic field. The biological and social underpinnings of conservation problems and potential solutions are interwoven throughout the text, which is divided into three sections: foundations of the field, threats to biodiversity, and approaches to solving conservation problems. Guest essays and case studies provide a diversity of perspectives and real-world examples that add insight and provoke discussion. The text is richly illustrated, and concludes with an extensive glossary and bibliography.

This book is intended for use in conservation biology courses at the advanced undergraduate and graduate levels, as well as by researchers and practitioners, and assumes a basic background in biology and ecology.

Editorial Review

Review
". . . remains the most comprehensive textbook and reference currently available on the subject." -- *Â—Jari NiemelÃ¤, Conservation Biology*

"... an excellent springboard for advanced biology students and a valuable resource for practitioners of conservation biology." -- *Â—Terry L. Derting, BioScience*

"It is simply the best book available on the many aspects of conservation biology and ramifications of biodiversity loss. " --*Â—Joseph C. Mitchell, ASB Bulletin*

About the Author
Martha J. Groom is an Associate Professor in the Interdisciplinary Arts and Sciences program at the University of Washington, Bothell and the Department of Biology, University of Washington, Seattle. She teaches conservation biology, ecology, landscape planning and topical courses on science, policy, and society. She has won several teaching awards. Her research focuses on the influences of fragmentation and landscape context on species persistence. Gary K. Meffe is an Adjunct Professor in the Department of Wildlife Ecology and Conservation at the University of Florida. He is senior author of Ecosystem Management: Adaptive, Community-Based Conservation, coauthor of Conserving Biodiversity on Military Lands: A Handbook for Natural Resources Managers, and coeditor of Ecology and Evolution of Livebearing Fishes. Since 1997 he has served as Editor of the international journal Conservation Biology. C. Ronald Carroll is the former Director of the Institute of Ecology at the University of Georgia and currently the Director for Science in the River Basin Science and Policy Center at the University of Georgia. He is the series editor for the newly initiated Southern Environment Series of the UGA Press. He teaches conservation ecology and conducts research on invasive species in the southeastern United States. He is also engaged in a large conservation and sustainable development project in Ecuador known as the ChocÃ³-Andean Corridor Project. The project is located in northwestern Ecuador and embraces two globally significant hotspots of biological diversity, the ChocÃ³ and the Western Andean slopes.

Users Review

From reader reviews:

Gerald Stewart:

The book Principles of Conservation Biology, Third Edition make you feel enjoy for your spare time. You may use to make your capable more increase. Book can to become your best friend when you getting tension or having big problem using your subject. If you can make studying a book Principles of Conservation Biology, Third Edition for being your habit, you can get more advantages, like add your personal capable, increase your knowledge about many or all subjects.
